

MARINE power®

PROFESSIONAL LINE OF PRODUCTS
FOR MARINE AQUARIUM

Marine Power is the new Tropical line of products dedicated to marine aquarium. Complex formulas of Marine Power foods are based mainly on raw materials of marine origin – herring, crustaceans and algae. The percentage of key ingredients that give food its valuable properties is exceptionally high and so is the amount of their nutrients and active substances which positively affect fish and corals' bodies. Low phosphorus content and high assimilability and hydrostability of the food limit the risk of imbalance in the tank caused by feeding. Moreover, Marine Power foods improve fish and invertebrates' immunity thanks to ingredients such as prebiotics from algae and vitamin C.

MARINE power®

PROFESSIONAL FOODS FOR CORALS AND MARINE FISH

Marine Power foods are based on carefully selected raw materials such as:

- herring**, whose protein has excellent amino-acid profile,
- crustaceans** rich in carotenoids, Omega-3 acids and chitin,
- insect larvae**, which provide high dose of energy,
- several species of algae**, which facilitate digestion and enhance immunity,
- a mix of trace elements** adjusted to animals' needs.

What makes Marine Power foods special?

- Rich formula which combines valuable natural raw materials (herring, insect larvae, crustaceans, molluscs and algae)
- High percentage share of specific raw materials
- High hydrostability
- Minimalized release of nutrients into the water
- Low phosphorus content
- Health-promoting properties due to their content of probiotics and prebiotics from algae and vitamin C

FOODS FOR CORALS

Most of the corals found in aquaria have a symbiotic relationship with algae (zooxanthellae). Photosynthesis carried out by zooxanthellae, requires access to light. The sugars produced as a result are a perfect source of energy for the corals. However, in order to grow corals need other ingredients, which they derive heterotrophically by sieving out phyto- and zooplankton and organic substances dispersed in the water. In the tank these are MARINE POWER CORAL FOODS which provide all these necessary nutrients. Their rich formula includes:

- microalgae
(*Spirulina platensis* 7%, *Chlorella vulgaris* 4%),
- marine macroalgae
(*Ascophyllum nodosum* 4.8%, *Laminaria digitata* 1.5%, *Lithothamnium calcareum* 0.6%),
- marine molluscs and crustaceans
(krill 10%, squid 6%, shrimps 5%, calanus 2%),
- herring (8.5%),
- insects (10%),
- trace elements (iron, zinc, manganese, copper, iodine, selenium, molybdenum) and vitamins, including vitamins from B group, vitamin D₃ and stabilized vitamin C.

A particularly valuable ingredient is *Lithothamnium calcareum*, which is the source of minerals, including highly bioavailable calcium and magnesium.

Marine Power foods for corals are available in three sizes. They ensure a diverse diet for excellent health, growth and coloration of corals.

MARINE POWER CORAL FOOD SPS POWDER

food with algae and crustaceans for corals

- food with marine crustaceans and molluscs and 5 species of algae in the form of powder (1-250 μm) for non-photosynthetic corals, soft corals, SPS corals and other filter feeders such as sponges, tunicates etc.
- it is the source of amino acids, phospholipids, PUFAs* (including Omega-3), carotenoids, biologically active substances which enhance the immune system, vitamins, trace elements and macronutrients of high bioavailability
- if used regularly, it ensures growth and splendid coloration of corals
- encourages polyp extension
- low phosphorus content limits the risk of imbalance in the tank resulting from feeding the corals
- food is characterized with a broad range of particle sizes (1-550 μm), more than 80% are particles of 1-250 μm
- easy to use

The size of MARINE POWER CORAL FOOD SPS POWDER (1-250 μm) allows for feeding non-photosynthetic corals, soft corals, SPS corals and other filter feeders such as sponges, tunicates etc. Thanks to the advanced technology used for production, the food is characterized with a broad range of particle sizes (1-550 μm), where more than 80% are particles of 1-250 μm .

FEEDING: 2-3 times a week or as needed. Add food into the small amount of water from the aquarium (dose depending on the number of corals and characteristics of the aquarium) and stir. Pour the suspension directly into the aquarium near the corals or feed them individually, using the included pipette.

*PUFAs – polyunsaturated fatty acids

MARINE POWER CORAL FOOD LPS MINI GRANULES

food with algae and crustaceans for corals

- food with marine crustaceans and molluscs and 5 species of algae in the form of sinking mini granules (0.8-1.0 mm) for *Ricordea*, *Rhodactis*, *Discosoma*, *Zoanthus* soft corals and LPS corals
- it is the source of amino acids, phospholipids, PUFAs* (including Omega-3), carotenoids, biologically active substances which enhance the immune system, vitamins, trace elements and macronutrients of high bioavailability
- if used regularly, it ensures growth and splendid coloration of corals
- encourages polyp extension
- low phosphorus content limits the risk of imbalance in the tank resulting from feeding the corals
- high hydrostability reduces to a minimum the release of nutrients into the water

*PUFAs – polyunsaturated fatty acids

The size of MARINE POWER CORAL FOOD LPS MINI GRANULES (0.8-1.0 mm) allows for feeding soft corals such as *Ricordea*, *Rhodactis*, *Discosoma*, *Zoanthus* and LPS corals. The food is eagerly accepted by the corals due to its nearly round shape and smooth surface of the granules. The advanced technology behind granules production including maximal grinding of the raw materials ensures uniform structure of the granules and lack of dust.

FEEDING: 2-3 times a week or as needed. Apply the food near the corals or feed them individually.

MARINE POWER CORAL FOOD LPS GRANULES

food with algae and crustaceans for corals and small fish

- food with marine crustaceans and molluscs and 5 species of algae in the form of sinking granules (1.2-1.4 mm) for *Ricordea*, *Rhodactis*, *Discosoma*, *Zoanthus* soft corals, LPS corals and small species of marine fish
- it is the source of amino acids, phospholipids, PUFAs* (including Omega-3), carotenoids, biologically active substances which enhance the immune system, vitamins, trace elements and macronutrients of high bioavailability
- if used regularly, it ensures growth and splendid coloration of corals and fish
- encourages polyp extension
- low phosphorus content limits the risk of imbalance in the tank resulting from feeding the corals
- high hydrostability reduces to a minimum the release of nutrients into the water

*PUFAs – polyunsaturated fatty acids

The size of MARINE POWER CORAL FOOD LPS GRANULES (1.2-1.4 mm) allows for feeding soft corals such as *Ricordea*, *Rhodactis*, *Discosoma*, *Zoanthus*, LPS corals and small species of marine fish. The food is eagerly accepted by the corals due to its nearly round shape and smooth surface of the granules. The advanced technology behind granules production including maximal grinding of the raw materials ensures uniform structure of the granules and lack of dust.

FEEDING: 2-3 times a week or as needed. Apply the food near the corals or feed them individually. Food intended for fish can be applied in automatic feeders.

FOODS FOR FISH

Marine Power products are intended for all species of omnivorous and herbivorous marine fish. Foods in the form of granules contain valuable natural raw materials whose ingredients enhance fish's health, condition and looks.

MARINE POWER SPIRULINA FORMULA GRANULES

food with spirulina for marine fish

- food in the form of sinking granules with high content of spirulina (36%)
- for everyday feeding of omnivorous and herbivorous marine fish
- spirulina contains up to 70% of protein rich in essential amino acids (including lysine, leucine, threonine) which stimulate fish's growth and proper development
- unsaturated fatty acids present in spirulina, including PUFAs* (which represent up to 2% of all fats), enhance reproduction, immunity and numerous physiological processes
- substances present in spirulina enhance fish's immune system and facilitate digestion
- thanks to carotenoids present in spirulina the food intensifies fish's coloration
- low phosphorus content limits the risk of imbalance in the tank resulting from fish feeding

*PUFAs – polyunsaturated fatty acids

MARINE POWER GARLIC FORMULA GRANULES

food with garlic for marine fish

- food in the form of sinking granules with high content of garlic (30%)
- for everyday or supplementary feeding of omnivorous marine fish
- garlic facilitates digestion and improves fish's natural immunity
- indispensable during medical treatment, convalescence, quarantine and acclimatization periods
- low phosphorus content limits the risk of imbalance in the tank resulting from fish feeding

MARINE POWER KRILL FORMULA GRANULES

food with krill for marine fish

- food in the form of sinking granules with high content of Antarctic krill (40%)
- for everyday feeding of omnivorous marine fish
- Antarctic krill is the source of protein rich in essential amino acids and unsaturated fatty acids, including Omega-3, which enhance fish's growth and overall condition
- due to its high content of carotenoids, including astaxanthin, food rapidly intensifies fish's coloration
- eagerly accepted even by wild-caught fish
- low phosphorus content limits the risk of imbalance in the tank resulting from fish feeding

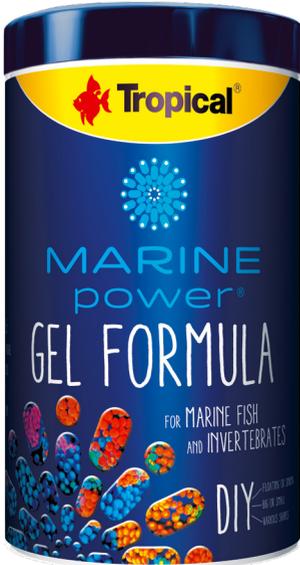

MARINE POWER PROBIOTIC SOFT FORMULA size S, M, L

food with probiotic, rich in algae and crustaceans, for marine fish

- soft food in the form of sinking granules with *Bacillus subtilis* probiotic for omnivorous marine fish
- probiotic added to the food contains viable bacterial endospores, which stabilize gut microflora, boosting fish resistance to pathogens and facilitating utilization of nutrients, which in turn reduces contamination of water with fish's feces
- probiotic increases fish's resistance to stress
- the food contains herring and insects which provide high quality protein and Omega-3, Omega-6 and Omega-9 fatty acids
- it also contains crustaceans and molluscs (krill 10.5%, squid 6%, calanus 1.7%) and algae (*Spirulina platensis* 12%, *Chlorella vulgaris* 8%, *Ascophyllum nodosum* 3%, *Laminaria digitata* 1.8%), which provide protein, carotenoids, minerals and prebiotics
- intensifies fish's coloration thanks to its high content of carotenoids from krill, calanus and red pepper

MARINE POWER GEL FORMULA

food for marine fish and invertebrates

- food in the form of DIY gel with marine crustaceans and molluscs and 5 species of algae for marine omnivorous fish and invertebrates
- the preparation is quick, easy and enjoyable
- you can choose the size and shape of the portions
- allows for preparing natural feeding grounds for fish and invertebrates in the form of rocks or plates covered with the gel
- depending on food preparation you can obtain food in the form of sinking or floating gel to meet the needs of both bottom feeders and animals that feed near the surface
- the consistency of the gel resembles natural food, hence encourages animals to feed
- convenient application and freezing possibility make the food a perfect alternative to frozen foods

GET INSPIRED

A wide variety of ingredients for the health of your fish

- food contains 5 species of algae: spirulina (*Spirulina platensis*), chlorella (*Chlorella vulgaris*), *Lithothamnium calcareum* and Kelp algae – *Ascophyllum nodosum* and *Laminaria digitata*
- unsaturated fatty acids, protein, vitamins, macronutrients, trace elements (including iodine, chromium, selenium and iron), natural prebiotics and dietary fiber (all from algae) ensure excellent condition, intensive growth and vitality of your tank's inhabitants
- invertebrates (shrimps, krill, squid, calanus, insects) and herring are the sources of high-quality protein and unsaturated fatty acids, including Omega-3, Omega-6 and Omega-9
- the combination of various ingredients of both animal and plant origin satisfies marine fish and invertebrates' demand for essential amino acids, PUFAs* (including Omega-3), vitamins and highly available trace elements and macronutrients, ensuring their proper growth and development
- high content of natural carotenoids from algae, crustaceans and red pepper together with the addition of astaxanthin enhance fish's coloration
- dietary fiber and chitin regulate digestion
- natural immune stimulator beta-glucan and bioactive algae ingredients improve fish's immunity
- low phosphorus content limits the risk of imbalance in the tank caused by feeding

*PUFAs – polyunsaturated fatty acids

CARE PRODUCTS AND SALTS

Available soon

MARINE POWER EASY CALCIUM

MARINE POWER EASY MAGNESIUM

MARINE POWER EASY KH/ALKALINITY

Solutions to supplement macronutrients and increase alkalinity

MARINE POWER EASY ANIONS

MARINE POWER EASY CATIONS

Trace elements supplement

MARINE POWER EASY SET 1

MARINE POWER EASY SET 2

Solutions containing all necessary macronutrients and trace elements. Special formula for easy supplementation

MARINE POWER SALT REEF BASE

MARINE POWER SALT REEF PLUS

Aquarium salts for all types of marine tanks.

They contain all necessary macronutrients and trace elements.
